Education

McMaster University Hamilton, Canada
Bachelor of Applied Science - Honours Computer Science (Co-op) *April 2025*

- Summa Cum Laude | CGPA: 3.7 | Awarded McMaster entrance scholarship

Technical Skills

Languages: Python, JavaScript, C, C#, Haskell, SQL, HTML/CSS
Frameworks: React, React Native, Express, Node, ASP.NET Core, Blazor, EF Core
Databases: PostgreSQL, SQL Server, Firestore
Developer Tools: Linux, Git, VS Code, Azure

Experience

Associate Product Developer **September 2026 - Current**
Valus *Dubai, UAE*

- Led the rebuild of a **459K-member** loyalty analytics platform from **React/Supabase** into a **.NET 10 Blazor Server** and **PostgreSQL** application (**EF Core, MudBlazor**), matching all 15 reporting pages while moving business logic from database functions into tested **C#**.
- Re-engineered the **Braze** data sync from serverless 45-second slices into a single background job with batched upserts, cutting full syncs from up to **2.5 hours** to about **6 minutes**, backed by **145 automated tests** including end-to-end runs against a mock Braze API.
- Built an **Azure DevOps CI/CD pipelin**e targeting **Azure App Service** and Azure Database for PostgreSQL, and designed the plan for **migrating** production data from Supabase.

Software Developer **June 2026 - Current**
Uqaab Consultants Inc. *Toronto, Ontario*

- Architected a reusable **C#** job pipeline using **Hangfire** and an **Outbox pattern** to convert legacy Boomi workflows into maintainable, testable services, removing dependency on Boomi's paid integration platform.
- Built end-to-end **NetSuite integration pipelines** reading from **SQL Server** staging tables via **EF Core**, executing SOAP API calls with full field mapping, validation and automatic error recovery, eliminating **3 hours** of manual data reconciliation per week.
- Designed **SQL Server** staging schemas and **EF Core migrations**, coordinating with upstream stored procedures to ensure reliable, end-to-end data syncs to NetSuite.

Junior Developer (Co-op) **May 2023 - August 2024**
Ontario Financing Authority (OFA) *Toronto, Ontario*

- Designed and built a **financial risk report** in **ASP.NET Core (C#)** with **SQL-based data retrieval**, working closely with the Risk team to meet their requirements, reducing errors and saving around **5 hours** of maintenance per week.
- Improved CORRA and SOFR rate precision from **2 decimal places** to f**ull published precision** by **migrating** data sources from Bloomberg to the Bank of Canada and New York Fed.
- Supported the migration of company email services to a **cloud-based** platform, implementing **OAuth** for secure, **token-based authentication**, improving **data security**, user access flexibility, and integration with enterprise applications.

Projects

ParkItPlace (Capstone Project) **September 2024 - March 2025**

- Built a cross-platform app **(React Native for iOS/Android**, plus a responsive **web interface**) letting users rent out driveways to students seeking affordable parking.
- Developed the backend on **Firebase (Firestore, Cloud Functions, Authentication**) and integrated **Stripe payments, Google Maps, Twilio SMS and SendGrid email.**
- **Automated deployment** with **GitHub Actions** and tested with **Jest** and **React Testing Library**.

Extracurricular Activities

Student Ambassador **January 2022 - April 2025**
McMaster Engineering

- Coordinated campus tours and Q&A sessions for 100+ prospective students annually, providing insights and resources for engineering programs.
