EDUCATION

McMaster University

Bachelor of Applied Science - Honours Computer Science (Co-op)

- Summa Cum Laude | CGPA: 3.7 | Awarded McMaster entrance scholarship

Hamilton, Canada

April 2025

TECHNICAL SKILLS

Languages: Python, JavaScript, C, C# Haskell, MySQL, HTML/CSS

Frameworks: React, Express, Node, ASP.NET Core

Developer Tools: Linux, Git, VS Code

EXPERIENCE

Software Developer

Uqaab Consultants Inc.

June 2026 - Current

Toronto, Ontario

- Architected a reusable **C#** job pipeline using **Hangfire** and an **Outbox pattern** to convert legacy Boomi workflows into maintainable, testable services, removing dependency on Boomi's paid integration platform.
- Built **end-to-end NetSuite integration pipelines** reading from **SQL Server** staging tables via **Entity Framework Core**, executing **SOAP API** calls with full field mapping, validation, and error recovery, cutting down manual data reconciliation.
- Designed **SQL Server** staging schemas and **EF Core migrations**, coordinating with upstream stored procedures to ensure reliable, end-to-end data syncs to NetSuite.

Junior Developer (Co-op)

Ontario Financing Authority (OFA)

May 2023 - August 2024

Toronto, Ontario

- Led the **design and development** of a comprehensive **financial report**, encompassing **front-end interface design** with **ASP.NET Core** in **C#**, **back-end integration** with **SQL-based data retrieval**, and close collaboration with the Risk team to meet their specific requirements, minimizing the risk of errors and saving around **5 hours** of maintenance work per week.
- Optimized **data accuracy** and reliability for CORRA and SOFR rates by **migrating data sources** from Bloomberg to the Bank of Canada and New York Federal Reserve websites, resolving decimal limitations and **enhancing precision** by approximately **25%** for critical financial reporting.
- Supported the migration of company email services to a **cloud-based** platform, implementing **OAuth** for secure, **token-based authentication**, improving **data security**, user access flexibility, and integration with enterprise applications.

PROJECTS

ParkItPlace (Capstone Project)

September 2024 - March 2025

- Built an application to enable users to rent out driveways for students seeking affordable parking options.
- Implemented the front end with **React Native** for cross-platform mobile functionality (**iOS/Android**) and a responsive, interactive web interface.
- Utilized **Firebase** for back-end services, including **Cloud Firestore** for real-time data storage, **Cloud Functions** for back-end code execution, and **Authentication** for user management.
- Integrated **Stripe** for secure payment processing, **Google Maps API** for interactive maps, **Twilio** for SMS notifications, and **SendGrid** for automated email updates.
- Incorporated **GitHub Actions** to automate deployment and streamline development, ensuring reliability through **Jest** for unit testing and the **React Testing Library** for component testing.

Deep Learning Face Detection Software

September 2022

- Took a small initial data set using the **OpenCV** library and used the **Albumentations** library to augment the images to create a larger and more robust data set to use for learning.
- Used the pre-existing VGG16 model in **TensorFlow Keras** and added new classification and regression models to allow it to detect faces through the use of a bounding box.

EXTRACURRICULAR ACTIVITIES

Student Ambassador

McMaster Engineering

January 2022 – April 2025

- Coordinated campus tours and Q&A sessions for 100+ prospective students annually, providing insights and resources for engineering programs.
